

## **SFO Workforce Diversity Data for 2017-18**

### **Introduction**

The SFO is required under Section 149 of the Equality Act 2010 (the Public sector Equality Duty) and the Equality Act 2010 (Specific Duties) Regulations 2011 to publish information that demonstrates our compliance with the general equality duty with regard to age, disability, ethnicity and gender. In addition to these statutory categories, we also monitor our workforce with regard to religious belief, sexual orientation, and part-time working.

### **Structure of the report**

This document provides summary profiles of our workforce by ethnicity, gender, religious belief, age, sexual orientation, disability and part-time workers as at 31 March 2018.

It also shows the diversity of our workforce in key areas within a typical employment cycle covering the 12 months between 1 April 2017 and 31 March 2018. The elements of the typical employment cycle for which workforce diversity data is provided are:

- Promotions
- Temporary promotions
- Appointments
- Exits
- Annual Bonuses
- In Year Bonuses

In publishing Diversity data, the SFO is mindful of the need to ensure that we comply with ONS guidelines and Civil Service best practice guidance on the monitoring of equality and diversity in employment. These guidelines prevent us from publishing any data which runs the risk of disclosing an individual's personal sensitive information. This is defined as any data where the numbers are less than 5.

The data is therefore presented as percentages to ensure that publication does not run the risk of disclosing an individual's personal sensitive information. By publishing the data in percentage terms we are able to make comparisons in relation to all the areas covered, between the proportion of each demographic in the total workforce and the proportion being promoted and rewarded. For example, our data shows that staff declaring themselves as BME make up 14% of the total SFO workforce and that 15% of those receiving an Annual Bonus were from a BME background.

### **Declaration Rates**

We ask all our employees to use our on-line self-service HR system to tell us their disability status, their ethnicity, their religion or belief and their sexual orientation. For each of these areas they have the option of 'Prefer not to say'. This option is combined with blank fields and are shown as Not known in the charts. As at 31 March 2018, the percentage of Unknown data ranged between 43% - 47% of the total. This is higher than previous years and an exercise to improve the voluntary declaration rate is to be undertaken during 2018.

The SFO recognises the need to increase employee diversity declarations and we have an ongoing campaign to raise awareness amongst employees, including messages supported by our Board level Diversity Champions.

### **Issues**

A set of pie charts are attached to this report to help illustrate the following points.

## **Ethnicity**

The percentage of declared BME staff now stands at 14% - a further decrease on previous years, although this is probably due as much to the lack of reported data (44% unknown) as to any worrying trend. The figure nevertheless still compares well with the UK civil service figure of 12.0%<sup>1</sup> (which also has 25% not declared/reported). 9% of new starters to the SFO declared a BME ethnicity, although 73% remain unknown. BME staff received 14% of in-year bonuses and 15% of annual bonuses, which is in line with the workforce figure. Statistically BME staff were more likely to receive a Temporary Promotion (21%), but less likely to be permanently promoted (9%).

## **Gender**

The percentage of Female staff in the SFO workforce stands at 43%, which is very similar to previous years. This remains below the UK civil service figures which has stayed at 54%. However, the percentage of female UK civil servants who work full time is 46%, which is much closer to the SFO figure (92% of SFO staff are full-time). Throughout all the other categories (bonus payment, promotions etc.), the percentage of female staff remains in line with the workforce.

## **Religious Belief**

The percentage of unknown respondents has increased since the previous year, which is due to the lack of data being received from new starters. Otherwise, the split between Christian and other religions within the other categories is broadly in line with the workforce data.

## **Age**

The SFO's workforce remains fairly evenly split in the main age groups, but as for last year the age group 25-34 supplies nearly half of new starters. The civil service statistics show a similar split, but uses slightly different bands.

## **Sexual Orientation**

Declaration rates for LGBT staff remain extremely low, although there has been a slight increase from last year.

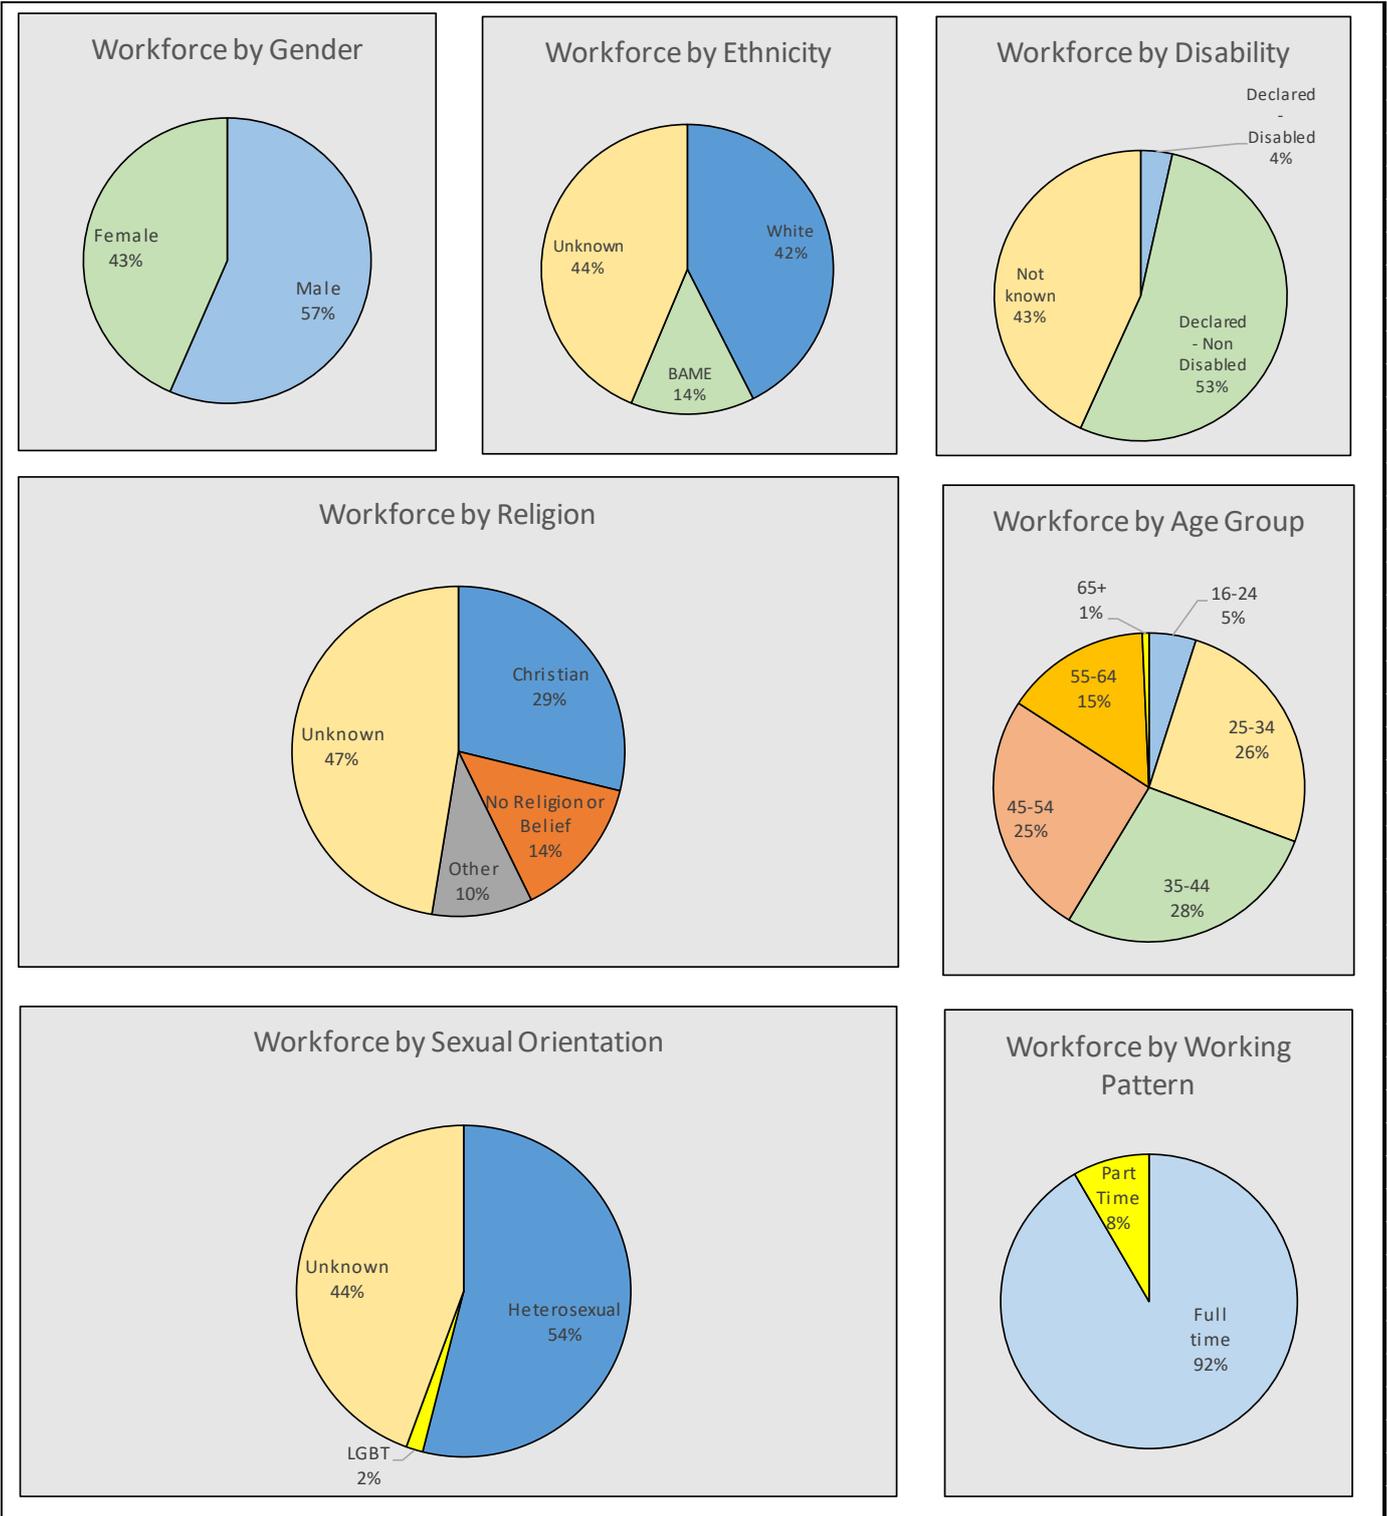

## **Disability**

The declaration rate of 4% marks no change from the previous year, and remains below the civil service level of 10%.

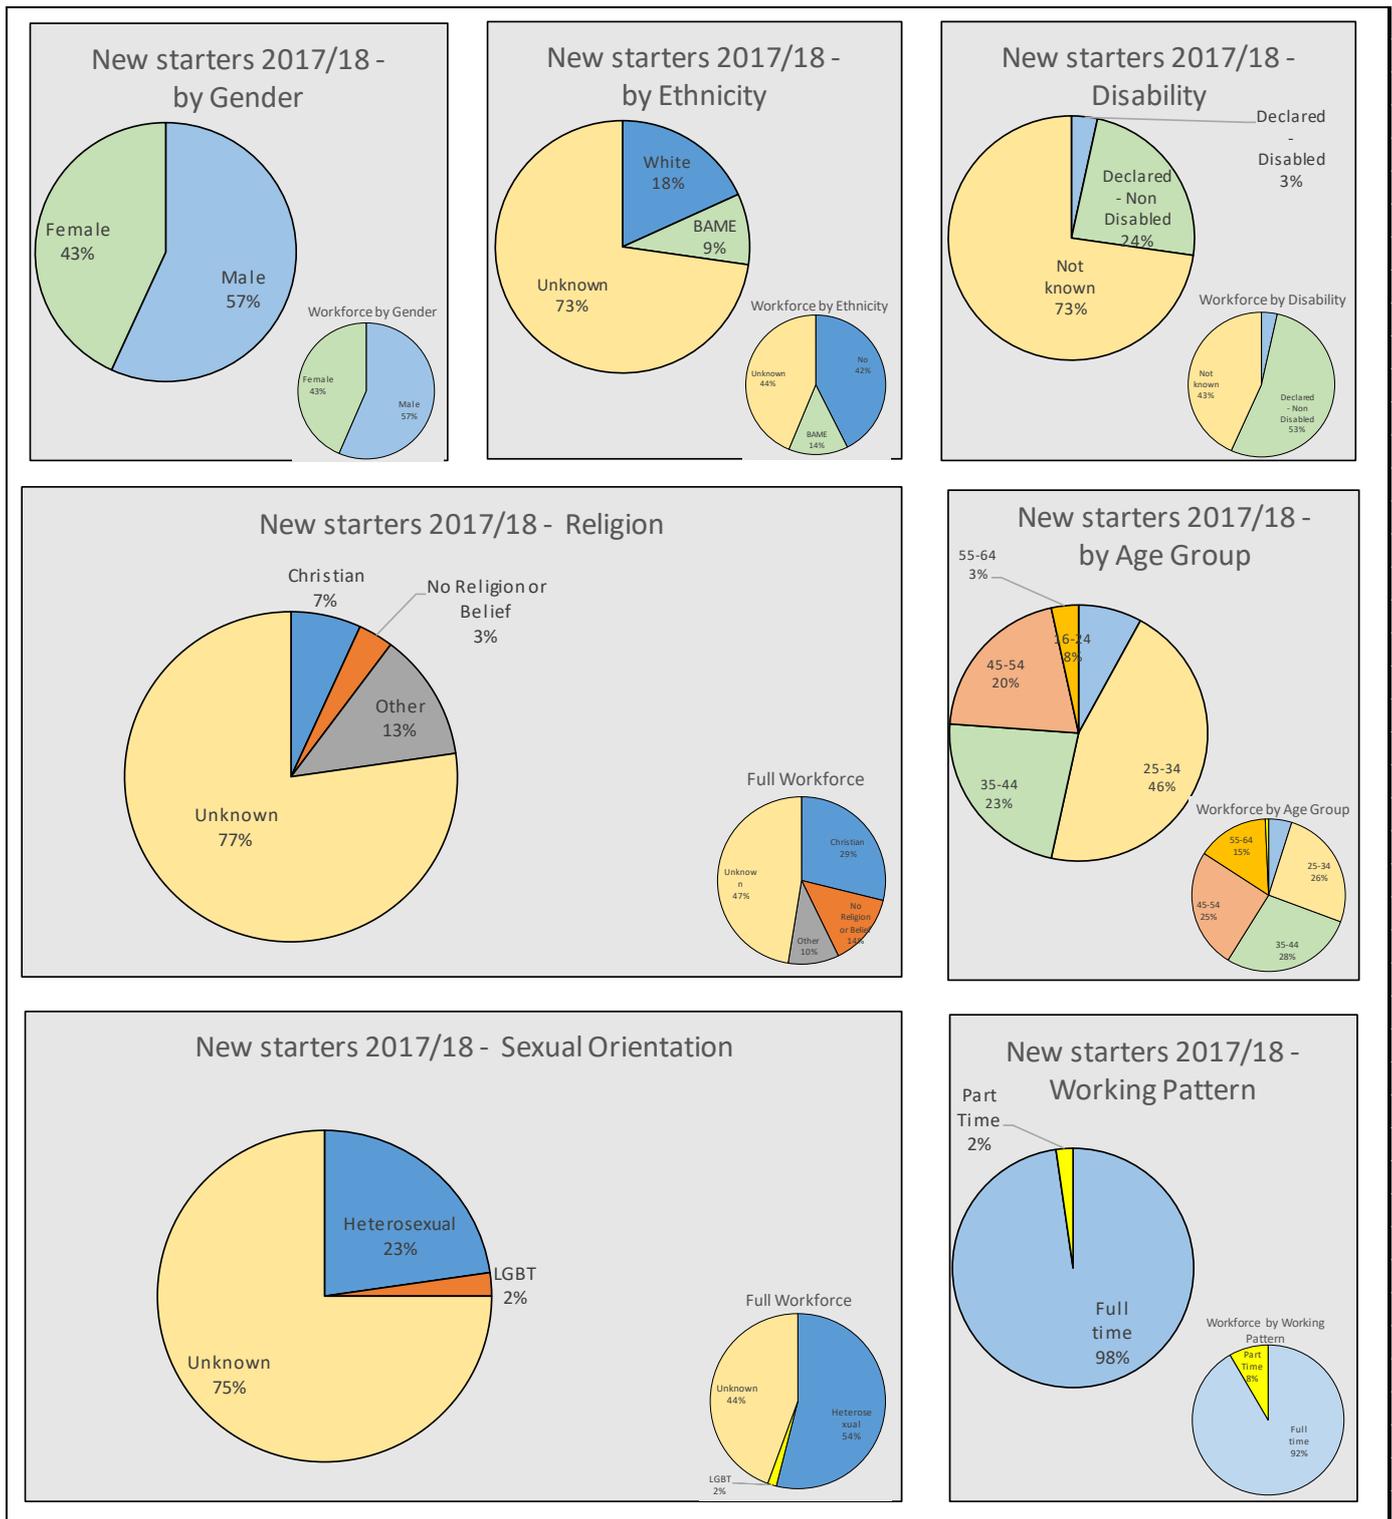

---

<sup>1</sup> UK civil service stats are as at 31 March 2018, as published on the ONS website.
